MATERIALS

We use several types of plastic in our production and their selection is always made with the environment in consideration. We are constantly working to improve our formulas in order to produce more and more environmentally friendly products.

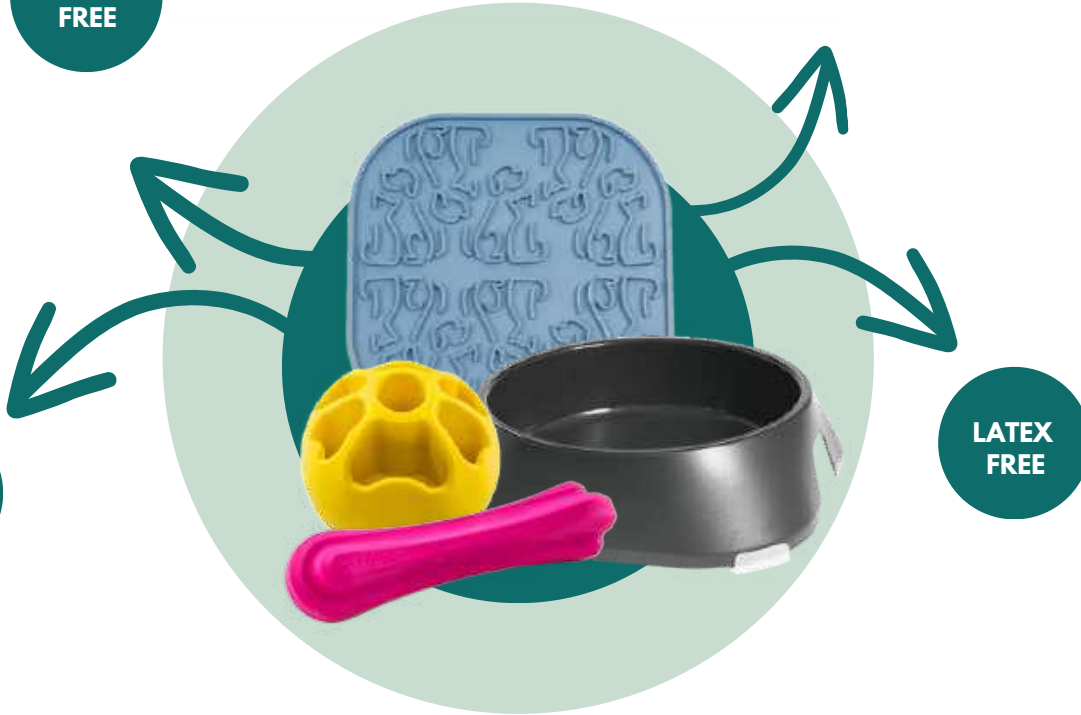

We ensure that our materials are :

**BPA
FREE**

**PHTALAN
FREE**

**PVC
FREE**

**LATEX
FREE**

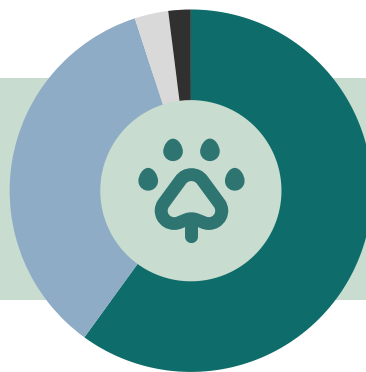

Percentage use of materials in fiboo products

**PET
35%**

**TPE-U PLA
3% 2%**

**TPE-S
60%**

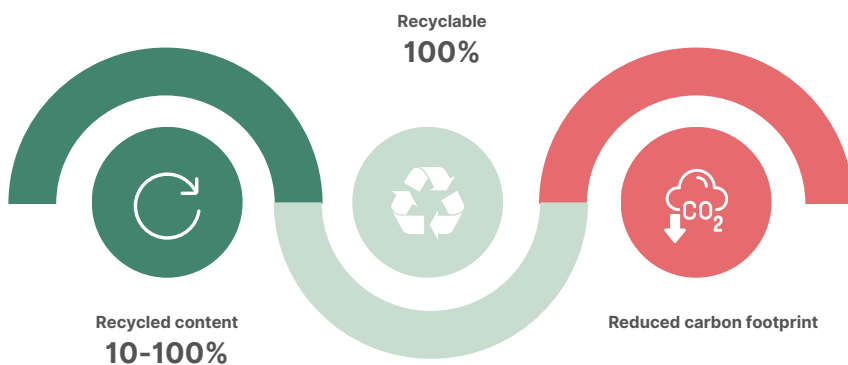

All materials are sourced by European suppliers and meet REACH standards.

All of our products that come into contact with food or may end up in your pet's mouth have been additionally examined.

[TPE-S]

THERMOPLASTIC ELASTOMERS

Elastomers are the leading material at Fiboo. We do our best to ensure that our materials contain an increasing amount of recyclates.

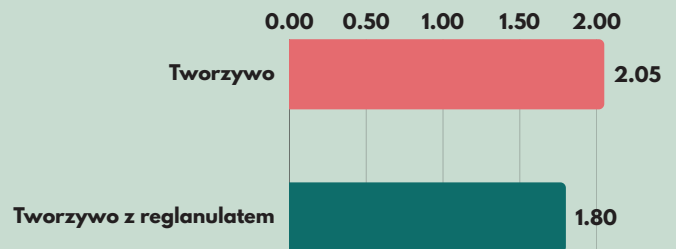

Thermoplastic elastomers - unlike rubber or silicone - can be easily reprocessed and have a significantly smaller carbon footprint.

Did you know that:

One of the materials we use containing 69% regranalate has a carbon footprint of 1.80 CO2e/kg compared to approximately 2.05 CO2e/kg for materials without regranalate.

Co2e/kg reduction - 25%

PRODUCTS MADE OF TPE-S

pet food mats

fibooes

pet toys

brushes

[rPET]

BOTTLE REINCARNATION

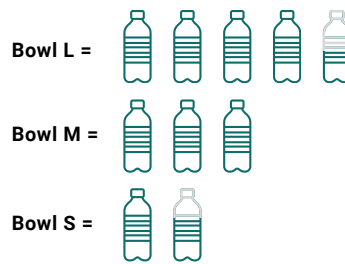

Regranulate from selective waste collections.

100% MADE OF RECYCLED PET BOTTLES

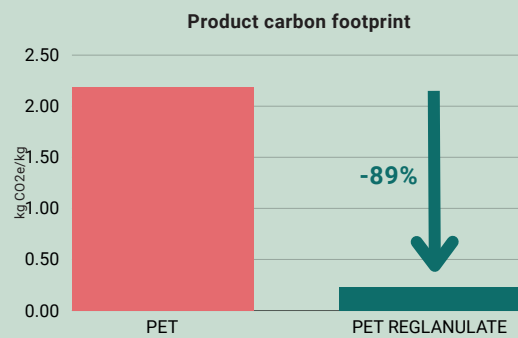

Have you ever wondered how many PET bottles it takes to let your pet enjoy its bowl from FIBOO?

By using recycled material we reduce the carbon footprint by almost 90%!

According to calculations provided by our supplier, the carbon footprint of our rPET is 0.21kg CO₂e/kg compared to 2.19kg CO₂e/kg for virgin material.

PRODUCTS MADE OF rPET

bowl L

[rPLA]

POLYLACTIDE

It is derived from renewable sources (corn starch) and has a smaller carbon footprint compared to traditional plastics, such as petroleum-based plastics.

100% BIOBASED

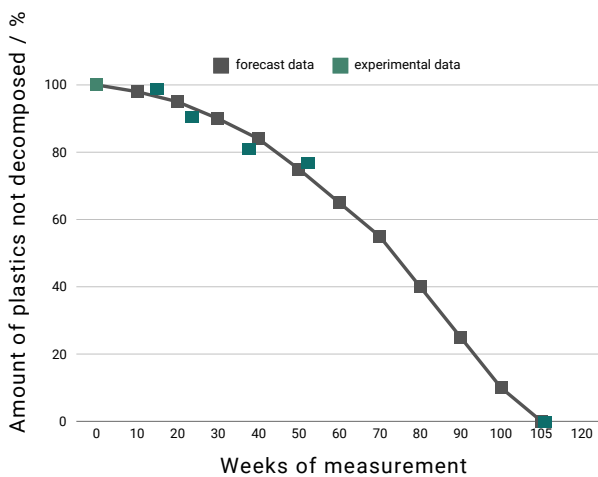

100% BIODEGRADABLE

100% REGLANULATE

PLA production generates fewer greenhouse gas emissions compared to traditional plastics. Moreover, the base ingredients for PLA production are plants which absorb carbon dioxide from the atmosphere during the growing process.

Our bowl made of rPLA should decompose in a home composter in as little as three years.
